

THE LANCET

Public Health

Supplementary appendix

This appendix formed part of the original submission and has been peer reviewed. We post it as supplied by the authors.

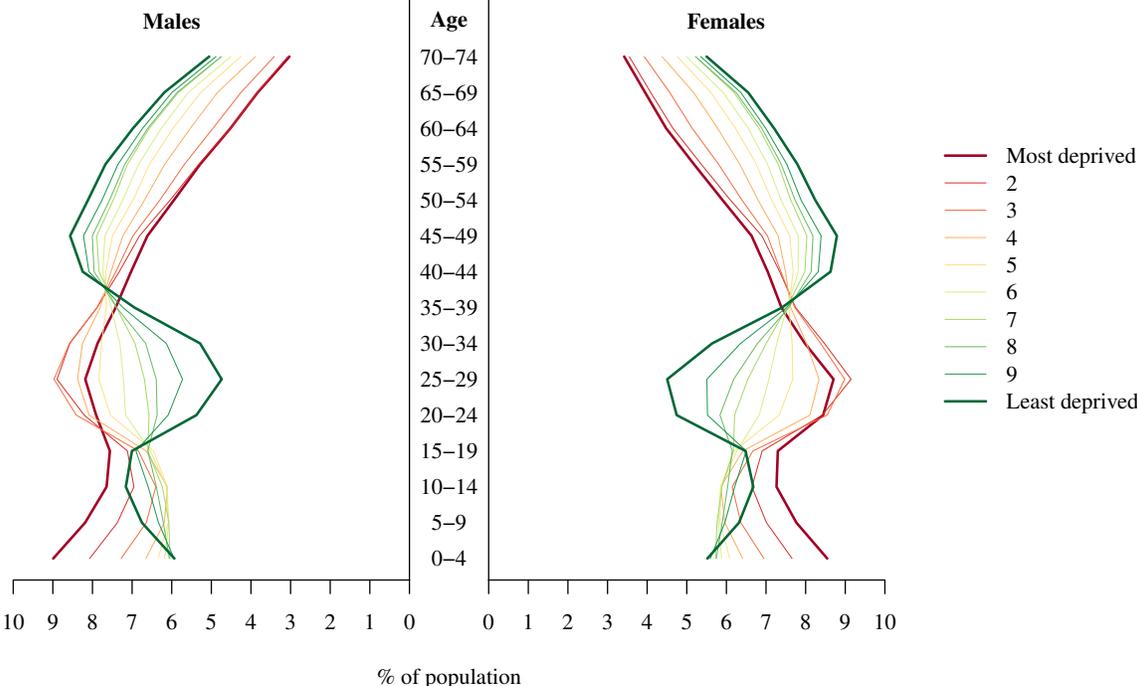

Supplement to: Lewer D, Jayatunga W, Aldridge RW, et al. Premature mortality attributable to socioeconomic inequality in England between 2003 and 2018: an observational study. *Lancet Public Health* 2019; published online Dec 5. [https://doi.org/10.1016/S2468-2667\(19\)30219-1](https://doi.org/10.1016/S2468-2667(19)30219-1).

Supplementary Information

1. Population pyramids by deprivation decile
2. Detailed cause-specific inequality
3. Mortality attributable to socioeconomic inequality, by major cause of death and sex
4. Map of mortality attributable to socioeconomic inequality, by local authority
5. Mortality attributable to socioeconomic inequality, using different quantiles of deprivation
6. Change in premature mortality rates between 2003-2006 and 2015-2018, by cause, sex and deprivation
7. Survival curves by sex and deprivation, estimated by life table modelling
8. References for supplementary information

1 Population pyramids by deprivation decile

Figure S1: Population pyramids by index of multiple deprivation 2015, aggregated for England, 2003-2018

Populations are taken from publicly available mid-year population estimates produced by the Office for National Statistics [1]

2 Detailed cause-specific inequality (table S1)

Chapter	Subgroup	Diagnosis	ICD10 codes	Deaths	Expected deaths	Excess deaths	% of excess deaths	MASI (95% CI)	YLLs	Expected YLLs	Excess YLLs	% of excess YLLs	YLLI (%)
I Infections	Tuberculosis		A15-19	2,111	412	1,699	0.19%	80.5% (74.7 to 86.0)	6,966	1,008	5,959	0.25%	85.5%

4 Map of mortality attributable to socioeconomic inequality by local authority district

An interactive map is [available online](#), which shows the number of deaths attributable to inequality in each local authority, and the underlying causes of the attributable deaths.

Figure S3: Proportion of premature deaths attributable to social inequality (MASI) by local authority, 2003-2018

Areas shown are either district councils or unitary authorities, with a total of 326 local authority areas.

5 Mortality attributable to socioeconomic inequality, using different quantiles of deprivation

In our main analysis, we calculated MASI using deciles of the Index of Multiple Deprivation (IMD). Deciles were based on individuals' local neighbourhood (or Lower Super Output Area). Each neighbourhood in England is ranked from 1 (most deprived) to 32,844 (least deprived), with deciles based on these ranks. As a sensitivity analysis, we recalculated MASI using different quantiles of the ranks. For example, the row in the table below showing 2 quantiles represents an analysis where the number of expected deaths is calculated by applying mortality rates in for the less deprived half of the population to the more deprived half. For this analysis we only used data from 2003 to 2017 (i.e. excluding 2018), because we had to use a bespoke population estimate for 2018 and only created this for deciles of deprivation.

Table S4: Mortality attributable to socioeconomic inequality (MASI), recalculated using different quantile of the Index of Multiple Deprivation, 2003-2018

Quantiles	Deaths	Expected Deaths	Attributable deaths	MASI (95% CI)
2	2,323,279	1,802,476	520,803	22.4% (22.3%-22.5%)
3	2,323,279	1,690,740	632,539	27.2% (27.1%-27.4%)
4	2,323,279	1,634,770	688,509	29.6% (29.4%-29.8%)
5	2,323,279	1,597,978	725,301	31.2% (31.0%-31.4%)
6	2,323,279	1,566,496	756,783	32.6% (32.3%-32.8%)
7	2,323,279	1,543,442	779,837	33.6% (33.3%-33.8%)
8	2,323,279	1,524,755	798,524	34.4% (34.1%-34.6%)
9	2,323,279	1,510,846	812,433	35.0% (34.7%-35.3%)
10	2,323,279	1,497,701	825,578	35.5% (35.2%-35.8%)
11	2,323,279	1,484,571	838,708	36.1% (35.8%-36.4%)
12	2,323,279	1,476,213	847,066	36.5% (36.1%-36.8%)

Standardisation was based on the European Standard population 2013 [2]

7 Survival curves by sex and deprivation, estimated by life table modelling

We used mortality rates for entire study period (2003-2018) by single-year-of-age, sex, and deciles of Index of Multiple Deprivation to construct 20 life tables (2 sexes * 10 deciles of deprivation) for cohorts of 100,000. The charts below show the proportion of each cohort that survived at each of age. For men, the proportion surviving to age 75 was 54% for the most deprived decile and 80% for the least deprived decile. For women, the proportions were 69% for the most deprived decile and 86% for the least deprived decile.

Figure S4: Survival curves by sex and deprivation to age 75, England, 2003-2018
